Academic Details

- **Bachelor of Technology (B.Tech) Computer Science Engineering (Artificial Intelligence and Machine Learning)**
Sri Indu Institute of Engineering and Technology, Hyderabad;
Pursuing, expected year of completion 2026
CGPA: 8.3

Soft Skills

Analytical | Collaborator | Leader | Adaptable
| Empathetic

Technical Skills

- **Programming Languages:**
JavaScript, Python, Java, HTML, CSS, MongoDB, React.js, Express.js, Node.js.
- **Frameworks:**
React, Express, Django, TensorFlow, Sklearn, Gsap.

Core Competencies

TensorFlow

Web development

HTML, JavaScript and Gsap

Machine Learning Algorithms

Bootstrap

CSS, Tailwind CSS

MERN stack

Front end

Profile Summary

- A full stack developer with high **problem-solving skills** and develops **complex projects**.
- I have proficiency in **UX design** and built projects which can be used by a widespread of people.
- **Developed a highly scalable system** which is used to diagnose disease in plants.
- Identified the visual inaccuracies in the existing college website and **improved** the UI.
- Possesses **in-depth knowledge of TensorFlow and other machine learning and deep learning frameworks**, which contributes to the efficient development of effective models.

Academic Projects

Plant Disease Detection System

Tools: MERN Stack, TensorFlow, AI.

The **Plant Disease Detection System** is an intelligent web-based application designed to **analyze plant health** and detect diseases through image classification. This system helps farmers, gardeners, and agricultural experts to identify **plant diseases** early and take **corrective actions**, ensuring crop health and maximum yield.

Responsibilities:

- **Designed and implemented the frontend** using **React.js**, featuring **image upload** and **camera capture functionality** for analyzing plant health directly from user devices.
- **Developed backend APIs** in **Node.js** with **Express.js**, handling **image uploads, form data**, and communication with the **Hugging Face Spaces API** for running disease prediction models.
- Created a custom-trained **CNN model** using **TensorFlow** to classify plant images based on disease presence.
- **Integrated Google Gemini AI API** to generate **personalized care recommendations**, including **fertilizer suggestions, natural remedies**, and **watering schedules**, enhancing the decision-making process for users.
- **Implemented RESTful services** for seamless communication between the **frontend, backend**, and **external AI APIs**, ensuring fast and reliable data exchange.
- **Deployed the entire MERN stack application on Render**, ensuring **high availability** and **reliable performance** for end-users accessing the system via the web.
- *Source Code:* [GitHub Repository] | *Live Demo:* [mern-test-client.onrender.com]

Academic Achievements

- Developed a Plant Disease Detection System using TensorFlow and MERN Stack to classify and diagnose plant diseases based on images, deployed on cloud platforms for efficient usage.
- <-Add-significant-achievements->

Personal Details

Date of Birth: 28th September 2004

Languages Known: English, Hindi and Telugu

Address: Hyderabad, Telangana
